I am an energetic and proactive food technology graduate from MIT-ADT University. I love exploring and working with new ideas and possibilities with food. I am well acquainted with food safety, HACCP, and risk analysis. I am enthusiastic about food innovation and development. I am a firm believer that technology and business go hand in hand and hence interested in analysing the market strategies of the different food products.

EDUCATION

B. Tech, Food Technology (August 2019 – June 2023) **Average GPA: 8.78/10**

MIT College of Food Technology, Pune

12th standard , CBSE (2018-19) - 75% (PCMB)

10th standard , CBSE (2016-17) - 93%

ACADEMIC PROJECTS

STUDIED ABOUT FT-IR & FT- NIR IN MILK & MILK PRODUCT ANALYSIS

Fourier transform infrared technology (FT-IR) and Fourier transform near infrared technology (FT-NIR) used for milk and milk product analysis using infrared waves which make the particles vibrate and an intensity vs time graph spectrum is obtained and by using fourier transform equation we get intensity vs frequency graph which is easily to find the molecules and functional group present and structure of the food sample. Then comparing the results by using reference methods.

PRODUCT DEVELOPMENT USING EXTRUSION TECHNOLOGY - NUTRI CRUNCH

Developed an extruded product using multigrain flour like rice flour, soybean flour , gram flour, jowar flour and flax seeds and sesame seeds. The product has high protein and low calories. Moreover, tested the product to determine the parameters like - %protein, %fat, %carbohydrates, %ash content, %moisture. Used a 9 point hedonic scale for sensory evaluation of the product.

Performed market research regarding the acceptability of the product amongst the consumers. Compared the product with the existing products in the market on the basis of nutritional value.

Sales evaluation conducted to check the cost effectiveness and age group most likely to buy the product.

DRY ICE AS A REFRIGERANT

Comparison between traditional freeze drying and freeze drying using dry ice.

Transportation of food by dry ice as refrigerant.

EXPERIENCE

- **MOTHER DAIRY FRUIT & VEGETABLE PVT. LTD.** Patparganj, New Delhi
 - Worked as an intern in Central Analytical Laboratory - performed various tests of milk and milk products. Checked the reliability of FT-IR and FT-NIR technology in the milk and milk product analysis.
 - Worked in the ice cream production department - Learned about the equipment working in the plant and CCP, OPRP operations. Learnt about the production of ice cream and its quality test(microbiological and chemical)
 - Worked in the Bulk Vending Milk production plant - Learnt the processing of milk and its quality test during procurement.
 - Worked in QA/QC lab - Performed experiments for quality analysis of products like butter, ghee and milk powder.

PUBLICATIONS

Development of Ready -to- eat (RTE) Extruded snack products with multigrain flour
International Journal of research and analytical reviews (IJRAR) · Jun 25, 2023

The investigation was undertaken to develop ready to eat (RTE) multigrain sticks by replacing traditional flour with varying concentrations of multigrain flour. The multigrain sticks were developed as a value addition to the traditional extruded food product such as soy sticks, chakli etc. The composite multigrain flour includes rice flour, chickpea flour, sorghum flour and soy flour with varying proportions. The developed multigrain sticks were analysed for its nutritional and sensory evaluation. Multigrain sticks developed with 40% rice flour, 25% chickpea flour, 10% soy flour , 10% sorghum flour, 3% sesame seeds , 3% flax seeds and spices were found to have more consumer acceptability with balanced nutrition.
